VENKATA SUBBARAO VENTRAPRAGADA

venkatasubbarao1305@gmail.com | +91 9381101735 | LinkedIn | GitHub

Professional Summary

Computer Science Engineering graduate with hands-on experience building and deploying AWS cloud solutions through practical projects. Skilled across AWS services including EC2, S3, RDS, CloudFront, CloudTrail, API Gateway, DynamoDB, CloudWatch, Lambda, and Route 53. Experienced in cloud networking, high availability, monitoring, security, and serverless automation. Seeking an entry-level AWS Cloud Engineer, Cloud Support, or Junior DevOps role.

Projects

AWS E-Commerce Application Deployment | EC2, RDS, ALB, ASG, CloudWatch code

- Deployed a full-stack e-commerce application using Amazon EC2 and Amazon RDS MySQL, establishing a scalable cloud-based application architecture.
- Configured Amazon CloudWatch for EC2 infrastructure monitoring, metrics, and log collection, and used AWS Lambda with S3 for serverless automation and centralized cloud storage.
- Implemented secure application access using IAM roles and Security Groups, configured Nginx for frontend-to-backend routing, and enabled HTTPS with ACM and Route 53 for custom-domain access.

AWS EC2 Monitoring & Alerting Project | EC2, Prometheus, Grafana, CloudWatch code

- Deployed a two-instance Amazon EC2 monitoring stack using Node Exporter and Prometheus to collect Linux infrastructure metrics including CPU, memory, disk, network, and uptime.
- Built Grafana dashboards using Prometheus and CloudWatch data sources to visualize EC2 infrastructure performance and system metrics in real time.
- Configured Prometheus alert rules with PagerDuty integration for high CPU, high disk usage, and instance-down conditions, and validated end-to-end alert and recovery workflows.

AWS Three-Tier Web Application Deployment | EC2, VPC, RDS, ALB, ASG

- Designed and deployed a highly available three-tier web application architecture across two Availability Zones using Amazon VPC.
- Configured EC2, Nginx, Application Load Balancer (ALB), Auto Scaling Group (ASG), Amazon RDS, and Route 53 to deliver scalable and highly available web applications.
- Implemented secure networking using public/private subnets, NAT Gateway, Bastion Host, IAM roles, Security Groups, and Route Tables following AWS best practices.

Education

Amrita Sai Institute of Science and Technology, AP — B.Tech, CSE — CGPA: 8.18 | 2022 – 2026

Narayana Junior College , AP — MPC in Intermediate — 2020 – 2022

SKZP High School, AP — SSC — 2019 – 2020

Key Skills

AWS Services: EC2, VPC, IAM, S3, RDS, DynamoDB, CloudFront, Route 53, Lambda, API Gateway, EventBridge

Networking: CIDR, Public & Private Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups, VPC Endpoints

High Availability & Scaling: Application Load Balancer (ALB), Auto Scaling Groups (ASG), Target Groups, Health Checks

Monitoring & Security: CloudWatch, CloudWatch Logs, CloudTrail, Prometheus, Grafana, PagerDuty, AWS WAF, ACM

Tools & OS: Amazon Linux, Linux, Git, GitHub, VS Code, Nginx

Database: MySQL

Achievements

- Completed multiple hands-on AWS cloud projects involving application deployment, high availability, monitoring, automation, networking, and security.
- Completed 3 company-backed virtual job simulations through Forage with Deloitte and TATA, covering Data Analytics, GenAI, and Data Visualization.
- Earned certifications including Microsoft Azure Fundamentals, Google Cloud AI, and TCS iON Career Edge – Young Professional.
